Hawk Marketplace - March 22, 2023

Note: Payment+ credit card processing goes into production for this release (toggled off) but will officially be released at a later date.

New Features

- Program Modeler users can now use the eGift Migration Support page to search for existing cardholders to resend eGifts to, control resend permissions, and redirect legacy eGift URLs to Activation Spot. (EPIC-18237)
- **CLIENT_PRODUCT** privilege now includes the ability to approve/deny branding tasks for brand card applications. (US114297)
- Invoices and invoice templates have been added to Activation on Demand for predenominated closed loop cards for an improved user experience. (US108822)
- Activation on Demand functionality has been added to the Adjust Reservation and Cancel Reservation

Improvements

- Payment types ACH Debit and ACH Credit and Wire have now been renamed **Auto ACH debit** and **Bank Transfer (EFT/Wire)** to provide global simplification and prevent clients from having to make changes when placing orders or remitting payments. (US102732)
- Order Central now registers Fund Upon Activation Physical Card information in Keystone during creation, allowing card servicing in Program Modeler, X1, and Keystone before activation. (EPIC-15784)
- Synchronous-only ordering is now available for Real-Time Virtual. (US111107)
- The `orderSubmitter` process has now been streamlined for virtual orders to prevent redirecting to the wrong order flow. (US113298)
- The Australian and United Kingdom Card Order Agreements on the product approval page of Hawk Marketplace have been updated. (US114525/US114524)
- In Program Modeler, the "Account Locked" error message has now been updated to provide the correct customer service information. (US105211)
- The `submitRealTimeEgiftIndividual` and `submitRealTimeEgiftBulk` APIs have been updated to include an "Out of Inventory" error. (US31385)
- UI changes to the Program Modeler shipping table, to increase efficiency in reviewing/updating pricing for all shipping types and vendors. ()
- General enhancements for Log4J and suborganization queries. (EPIC-16756)

Bug Fixes

- Fixed an issue that caused client Notes to get stuck in the "Add pending" status. (US111004)
- Fixed an issue that caused the incorrect order total to display for the UK Reversal in Hawk Marketplace/Program Modeler. (US115078)
- Fixed an issue that caused recipient details to fail to open on VOL orders with more than 2100 recipients. (US106599)

Deprecations and Removals

- CREDIT_CARD has been removed as a payment type for API orders. (US105571)
